

Excel plug-in 2003

The basic requirement for installing Excel plug-in is .NET Framework 3.5 SP1. So it must be downloaded and installed first.

The downloaded file has a folder named 'Excel_2003Plugin(VS08)'. It consists of following items:

- Office 2003 PIA (folder)
- WindowsInstaller3_1 (folder)
- Vstor 2005 (folder)
- Excel_Sms2003_PluginSetup (windows installer file)
- Setup (the setup file for excel 2003 plugin)

Go to Vstor 2005 folder and click vstor. Accept the terms and conditions by clicking 'Yes'. Now specify a location where vstor is to be extracted. You can directly enter the location in the space provided or browse the location.

Now click the setup file. Run the setup. Excel 2003 is now installed.
